Presqu'île de Giens, France 5-12 Nov 2021

TR-T-06 – Suivi de qualité d'un microscope photonique dans le temps
Dialogue avec les constructeurs

Preamble :

- The manufacturers invited to this round table were invited because they are manufacturers of wide-field microscopes, confocal microscopes and lenses dedicated to light microscopy. Dialogue is of course **open to all manufacturers of microscopes and peripherals.**
- Terminology: Metrology vs Quality Control
- Restitution of work carried out for several years: a dialogue was initiated by the GT-3M to try to harmonize the protocols for monitoring the quality of the systems over time.

Program:

- Presentation of the issues;
- Report of discussions between GT3M and manufacturers over the past years;
- Discussion around a proposal for the harmonization of the first measures to be carried out after installation on site, in addition to "official" training;
- Advances in commercial systems metrology;
- International quality monitoring of a light microscope over time: QUAREP-LiMi and MicroMeta App initiatives;
- Additional matters: joint letter signed by Germany, Switzerland and France attached;
- Balance sheet

1. Presentation of the issues

Observation: the quality control of light microscopy systems is too often neglected by users.

Lack of (human) means, lack of tools, lack of protocols.

Upon purchase, the sensitive points of a microscope are not quantified.

In Life Sciences, to quantify an image, measurements of sensitive points over time are the key to the reliability and reproducibility of the results.

Develop quick and simple protocols, using inexpensive tools [shared with manufacturers] - GT 3M.

Be aware of what is feasible at national level.

1. Presentation of the issues

RTmfm's GT3M workflow presentation

- Tools

Bead slides (1 μ m, 170nm), plastic slides, power meter.

- Protocols

Developed and tested by GT3M for several years, metrics and limit values
10 core-facilities involved

– publication in progress : <https://www.biorxiv.org/content/10.1101/2021.06.16.448633v1>

- Analyse : MetroloJ QC

Plugin ImageJ/Fiji : https://github.com/MontpellierRessourcesImagerie/MetroloJ_QC

- Monitoring over time

1. Presentation of the issues: why it is good

For users

Better understanding of the system

Monitoring over time = reproducibility

Reduced system downtime

For companies

Everything is ready ! Protocols, samples, analysis

Time saving for everyone: common vocabulary = less travel

Branding, dialogue, loyalty

2. Report of discussions between GT3M and manufacturers over the past years

Leica : 5 meetings

Nikon : 3 meetings

Olympus : 3 meetings

Zeiss : 4 meetings

summary tables
(confidential)

Thank you for your investment and your goodwill !!!!

Results :

- blocking points :

- .dialogue with the factory / developers sometimes hard for you and us
- .the factories rarely share the ITP (Inspection & Test Plan) values

But the will is there!

3. Discussion around a proposal for the harmonization of the first measures to be carried out after installation on site, in addition to training

Proposal to everyone to apply the GT3M RTmfm protocols to the installation of a system.

Less than 1/2d of training - learning the software.

Source power / Homogeneity / Co-registration / PSF / Drift / Repositioning /
Camera noise

User awareness of QC over time Improved dialogue with after-sales service to
troubleshoot machines more quickly with establishment of a common vocabulary
= less travel

4. Advances in commercial systems metrology

5 min presentation per constructeur

5. The quality monitoring of a light microscope over time internationally : [QUAREP-LiMi](#) and [MicroMeta App](#)

Quality Assessment and Reproducibility for Instruments & Images in Light Microscopy

- Enthusiastic consortium created in April 2020 at the initiative of GerBI and RTmfm335 participants, 29 countries represented
- Academics, companies, ISO, publishers ...National networks (RMS, BINA, GerBI, RTmfm, Netherland, Japan ...)
- 11 WG (source, detectors, homogeneity, co-registration, PSF, [...], metadata, image quality, good practices in publication of microscopy data)
- international harmonization of measurement methods

What feedback from your side?

5. The quality monitoring of a light microscope over time internationally : [QUAREP-LiMi](#) and [MicroMeta App](#)

Intuitive and visual software for managing microscope metadata

<https://github.com/WU-BIMAC/MicroMetaApp.github.io>

Caterina Strambio-De-Castilla *et al.*, (Univ. Mass.)

Micro-Meta App: an interactive software tool to facilitate the collection of microscopy metadata based on community-driven specifications

In press, Nat. Meth., 2021

5. The quality monitoring of a light microscope over time internationally : [QUAREP-LiMi](#) and [MicroMeta App](#)

MICRO META APP MICROSCOPY METADATA FOR THE REAL WORLD

Microscope Name: STRAMBIO_TESM_032221
 MicroscopeStand Name: TESM Microscope Stand
 MicroscopeStand Manufacturer: Olympus/Biomedical Imaging Group
 MicroscopeStand Model: Custom built on the basis of IX71
 MicroscopeStand Type: Custom made
